EDUCATION

Arcadia University

Bachelor of Science in Computer Science

- Secretary of Computer Science Club
- GPA: 3.6
- Relevant Courses: Data Structures and Algorithms, Client and Server Side Web Development

Glenside, PA

Aug. 2024 – May 2028

EXPERIENCE

Lowicks

Software Engineering Intern

Feb. 2026 – Present

Remote

- Co-developed the landing page and admin dashboard for a private marketplace on Cloudflare Workers (Hono SSR/JSX, TypeScript, HTMX, D1 SQLite), with JWT auth, real-time search, multi-column sort, pagination, and CSV export—capturing ~100 founding members via WhatsApp.
- Architecting a React Native app (iOS + Android) featuring OTP onboarding, sponsor-gated feature access, a listing/offer marketplace flow, WhatsApp-integrated notifications, and an in-app AI concierge.
- Integrated Resend transactional email across application, approval, and host-interest lifecycle events using injection-safe, HTML-escaped templates to prevent XSS, secured by Wrangler-managed environment secrets.

Information Technology Support Assistant

Arcadia University

Sep. 2024 – Present

Glenside, PA

- Diagnose and resolve hardware, software, and network issues for students, faculty, and staff, consistently handling 50+ support requests per week.
- Configure, deploy, and maintain campus workstations, printers, and classroom technology to ensure reliable day-to-day operation.

PROJECTS

Riven — Student OS | React, Supabase, Deno, TypeScript, PostgreSQL

Dec. 2025 – Present

- Built a full-stack study platform (React 19 SPA + native iOS via Capacitor) on 39 Deno edge functions over a 48-table PostgreSQL schema, shipping AI content generation, realtime collaborative study groups, spaced-repetition review, and a gamified progress system.
- Engineered an LLM pipeline converting notes, PDFs, audio, and YouTube transcripts into flashcard decks, mock exams, and study guides—via OpenAI Whisper transcription, SSE streaming, a persistent job queue, and per-user rate limiting.
- Integrated dual billing—Stripe for web, RevenueCat for iOS—with signature-verified, idempotent webhooks, and maintained runtime-agnostic shared business logic unit-tested identically under Node.js and Deno across 60+ test files.

Dawn — Token-Frugal AI Coding Agent | TypeScript, Bun, SQLite, Anthropic SDK

Jun. 2026 – Present

- Architected an open-source terminal coding agent in Bun + TypeScript with an interactive TUI, permissioned tool sandbox, and SQLite-backed resumable sessions, designed from the ground up around LLM context cost.
- Designed a per-turn context budget planner that packs each model request to a token budget using cached file summaries, TTL-leased working sets, and atomic history trimming, cutting input tokens up to 70% versus a full-context baseline.
- Engineered reversible, content-aware compaction for large tool outputs (JSON, logs, grep, text), stashing originals in SQLite behind an expand command so context shrinks without losing information.

ArchieAI — University-Themed AI Chatbot | HTML, CSS, Python, Flask

Oct. 2024 – Nov. 2024

- Built a responsive chatbot frontend in HTML and CSS and collaborated on Flask backend logic covering routing, REST API integration, prompt handling, and message parsing.
- Implemented a conversational interface allowing students to query campus resources, class information, and support services via a Generative AI backend.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, HTML, CSS, SQL

Frameworks & Libraries: React, React Native, Next.js, Node.js, Hono, HTMX, Deno, Bun, Flask

Databases & Tools: PostgreSQL, MySQL, MongoDB, SQLite, Supabase, Cloudflare Workers, Cloudflare D1, Git, GitHub, Vercel, GCP

Concepts: REST APIs, Object-Oriented Programming, LLM Integration, Unit Testing, Agile, Debugging, Responsive Design, API Integration, Project Leadership
